Q1. Git/GitHub

No handwritten homework reports are accepted for this course. We work with Git and GitHub. Efficient and abundant use of Git, e.g., frequent and well-documented commits, is an important

criterion for grading your homework.

Apply for the Student Developer Pack at GitHub using your UCLA email. You'll get GitHub Pro account for free (unlimited public and private repositories).

Create a private repository biostat-203b-2025-winter and add Hua-Zhou and TA team (Tomoki-Okuno for Lec 1; parsajamshidian and BowenZhang2001 for Lec 82) as your collaborators with write permission.

Top directories of the repository should be hw1, hw2, ... Maintain two branches main and develop. The develop branch will be your main playground, the place where you develop solution (code) to homework problems and write up report. The main branch will be your presentation area. Submit your homework files (Quarto file qmd, html file converted by Quarto, all code and extra data sets to reproduce results) in the main branch.

After each homework due date, course reader and instructor will check out your main branch for grading. Tag each of your homework submissions with tag names hw1, hw2, ... Tagging time will be used as your submission time. That means if you tag your hw1 submission after deadline, penalty points will be deducted for late submission.

After this course, you can make this repository public and use it to demonstrate your skill sets on job market.

Solution Done.

Q2. Data ethics training

This exercise (and later in this course) uses the MIMIC-IV data v3.1, a freely accessible critical care database developed by the MIT Lab for Computational Physiology. Follow the instructions at https://mimic.mit.edu/docs/gettingstarted/ to (1) complete the CITI Data or Specimens Only Research course and (2) obtain the PhysioNet credential for using the MIMIC-IV data. Display the verification links to your completion report and completion certificate here. You must complete Q2 before working on the remaining questions. (Hint: The CITI training takes a few hours and the PhysioNet credentialing takes a couple days; do not leave it to the last minute.)

Solution Here is the Completion Report and my Completion Certificate of my CITI Training.

Q3. Linux Shell Commands

Make the MIMIC-IV v3.1 data available at location \sim /mimic. The output of the ls -l \sim /mimic command should be similar to the below (from my laptop).

content of mimic folder

```
#content of mimic folder
ls -l ~/mimic/
```

```
total 48

Refer to the documentation https://physionet.org/content/mimiciv/3.1/ for details of data files. Do not put these data files into Git; they are big. Do not copy them into your directory. Do not decompress the gz data files. These create unnecessary big files and are not big-data-friendly practices. Read from the data folder ~/mimic directly in following exercises.

Use Bash commands to answer following questions.

Solution I downloaded the Mimic_IV v3.1 data and it is available under the ~/mimic folder as requested.

2. Display the contents in the folders hosp and icu using Bash command ls -l. Why are these data files distributed as .csv.gz files instead of .csv (comma separated values) files? Read the page https://mimic.mit.edu/docs/iv/ to understand what's in each folder.

Solution Here is the content of the hosp folder

```
ls -l ~/mimic/hosp/
```

```

                                  24096834 Apr 12 2024 procedureevents.csv.gz
                         staff
```

These data files were distributed as gz files because they are giant files and allows them to be downloaded and distributed faster and easier.

3. Briefly describe what Bash commands zcat, zless, zmore, and zgrep do.

Solution Zcat decompresses a compressed file (.gz).

Solution Zmore views compressed files, but cannot navigate as easily

Solution Zless views compressed files with easy navigation line by line

Solution Zgrep searches compressed files for terms and returns with matching lines.

4. (Looping in Bash) What's the output of the following bash script?

Solution Here is the output

```
for datafile in ~/mimic/hosp/{a,1,pa}*.gz
do
    ls -l $datafile
done
```

```
-rw-r--r-@ 1 lukehodges staff 19928140 Jun 24 2024 /Users/lukehodges/mimic/hosp/admission-rw-r--r-@ 1 lukehodges staff 2592909134 Oct 3 09:08 /Users/lukehodges/mimic/hosp/labever-rw-r--r-@ 1 lukehodges staff 2835586 Apr 12 2024 /Users/lukehodges/mimic/hosp/patients.
```

Display the number of lines in each data file using a similar loop. (Hint: combine linux commands zcat < and wc -l.)

Solution Here are the lines in admissions file

```
for datafile in ~/mimic/hosp/admissions.csv.gz
do
zcat < $datafile | wc -l
done</pre>
```

546029

Solution Here are the lines in the labevents file

```
for datafile in ~/mimic/hosp/labevents.csv.gz
do
zcat < $datafile | wc -l
done</pre>
```

158374765

Solution Here are the lines in the patients file

```
for datafile in ~/mimic/hosp/patients.csv.gz
do
zcat < $datafile | wc -l
done</pre>
```

364628

5. Display the first few lines of admissions.csv.gz. How many rows are in this data file, excluding the header line? Each hadm_id identifies a hospitalization. How many hospitalizations are in this data file? How many unique patients (identified by subject_id) are in this data file? Do they match the number of patients listed in the patients.csv.gz file? (Hint: combine Linux commands zcat <, head/tail, awk, sort, uniq, wc, and so on.)

Solution Here are the first few lines of admissions.csv.gz

```
for datafile in ~/mimic/hosp/admissions.csv.gz
do
zcat < $datafile | head
done</pre>
```

```
subject_id,hadm_id,admittime,dischtime,deathtime,admission_type,admit_provider_id,admission_10000032,22595853,2180-05-06 22:23:00,2180-05-07 17:15:00,,URGENT,P49AFC,TRANSFER FROM HOSPI 10000032,22841357,2180-06-26 18:27:00,2180-06-27 18:49:00,,EW EMER.,P784FA,EMERGENCY ROOM,HOI 10000032,25742920,2180-08-05 23:44:00,2180-08-07 17:50:00,,EW EMER.,P19UTS,EMERGENCY ROOM,HOI 10000032,29079034,2180-07-23 12:35:00,2180-07-25 17:55:00,,EW EMER.,P06OTX,EMERGENCY ROOM,HOI 10000068,25022803,2160-03-03 23:16:00,2160-03-04 06:26:00,,EU OBSERVATION,P39NWO,EMERGENCY ROOM,HOI 10000084,23052089,2160-11-21 01:56:00,2160-11-25 14:52:00,,EW EMER.,P42H7G,WALK-IN/SELF REFEI 10000084,29888819,2160-12-28 05:11:00,2160-12-28 16:07:00,,EU OBSERVATION,P35NE4,PHYSICIAN RICCOMMONO 10000084,29888819,2160-12-28 05:11:00,2160-12-28 09:04:00,,EU OBSERVATION,P40JML,EMERGENCY RICCOMMONO 1000017,22927623,2181-11-15 02:05:00,2181-11-15 14:52:00,,EU OBSERVATION,P47EY8,EMERGENCY RICCOMMONO 1000017,22927623,2181-11-15 02:05:00,2181-11-15 14:52:00,,EU OBSERVATION,P47EY8,EMERGENCY RICCOMMONO 1000018,27250926,2163-09-27 23:17:00,2163-09-28 09:04:00,,EU OBSERVATION,P47EY8,EMERGENCY RICCOMMONO 1000018,27250926,2163-09-28 09:04:00,,EU OBSERVATION,P47EY8,EMERGENCY RICCOMMONO 1000018,27250926,2163-09-28 09:04:00,,EU OBSERVATION,P47EY8,EMERGENCY RICCOMMONO 1000018,27250926,2163-09-28 09:04:00,,EU OBSERVATION,P47EY8,EMERGENCY RICCOMMONO 1000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,2000018,20
```

Solution Counting the total number of rows excluding the header

```
zcat < ~/mimic/hosp/admissions.csv.gz | tail -n +2 | wc -l
```

546028

Solution Number of unique hospitalizations

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $2}' |
sort |
uniq |
wc -1</pre>
```

546028

The number of rows is the number of unique hospitalizations.

Peek the first few lines of 'patients.csv.gz'

```
zcat < ~/mimic/hosp/patients.csv.gz | head</pre>
```

```
subject_id,gender,anchor_age,anchor_year,anchor_year_group,dod
10000032,F,52,2180,2014 - 2016,2180-09-09
10000048,F,23,2126,2008 - 2010,
10000058,F,33,2168,2020 - 2022,
10000068,F,19,2160,2008 - 2010,
10000084,M,72,2160,2017 - 2019,2161-02-13
10000102,F,27,2136,2008 - 2010,
10000108,M,25,2163,2014 - 2016,
10000115,M,24,2154,2017 - 2019,
10000117,F,48,2174,2008 - 2010,
```

The number of unique patients in this file is:

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $1}' |
sort |
uniq |
wc -l</pre>
```

223452

This should match the number in the patients file

```
zcat < ~/mimic/hosp/patients.csv.gz |
tail -n +2 |
awk -F, '{print $1}' |
sort |
uniq |
wc -l</pre>
```

364627

The total number of unique patients in the admissions file is less.

6. What are the possible values taken by each of the variable admission_type, admission_location, insurance, and ethnicity? Also report the count for each unique value of these variables in decreasing order. (Hint: combine Linux commands zcat, head/tail, awk, uniq -c, wc, sort, and so on; skip the header line.)

Solution You need to first examine the admissions file.

```
zcat < ~/mimic/hosp/admissions.csv.gz | head</pre>
```

```
subject_id,hadm_id,admittime,dischtime,deathtime,admission_type,admit_provider_id,admission_10000032,22595853,2180-05-06 22:23:00,2180-05-07 17:15:00,,URGENT,P49AFC,TRANSFER FROM HOSPI 10000032,22841357,2180-06-26 18:27:00,2180-06-27 18:49:00,,EW EMER.,P784FA,EMERGENCY ROOM,HOI 10000032,25742920,2180-08-05 23:44:00,2180-08-07 17:50:00,,EW EMER.,P19UTS,EMERGENCY ROOM,HOI 10000032,29079034,2180-07-23 12:35:00,2180-07-25 17:55:00,,EW EMER.,P06OTX,EMERGENCY ROOM,HOI 10000068,25022803,2160-03-03 23:16:00,2160-03-04 06:26:00,,EU OBSERVATION,P39NWO,EMERGENCY ROOM,HOI 10000084,23052089,2160-11-21 01:56:00,2160-11-25 14:52:00,,EW EMER.,P42H7G,WALK-IN/SELF REFEI 10000084,29888819,2160-12-28 05:11:00,2160-12-28 16:07:00,,EU OBSERVATION,P35NE4,PHYSICIAN RICCOMMINICATION RI
```

Admission type is the sixth column so the possible values include:

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $6}' |
sort |
uniq |
wc -l</pre>
```

9

So there are nine different admission types.

For Admissions location:

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $8}' |
sort |
uniq |
wc -l</pre>
```

There are twelve different admission locations.

For insurance:

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $10}' |
sort |
uniq |
wc -l</pre>
```

6

There are six insurance

For ethnicity:

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $13}' |
sort |
uniq |
wc -1</pre>
```

33

There are 33 ethnicities.

7. The icusays.csv.gz file contains all the ICU stays during the study period. How many ICU stays, identified by stay_id, are in this data file? How many unique patients, identified by subject_id, are in this data file?

Solution

To start, we must look into the icusays.csv.gz file

```
zcat < ~/mimic/icu/icustays.csv.gz | head</pre>
```

subject_id,hadm_id,stay_id,first_careunit,last_careunit,intime,outtime,los
10000032,29079034,39553978,Medical Intensive Care Unit (MICU),Medical Intensive Care Unit (M
10000690,25860671,37081114,Medical Intensive Care Unit (MICU),Medical Intensive Care Unit (M
10000980,26913865,39765666,Medical Intensive Care Unit (MICU),Medical Intensive Care Unit (M
10001217,24597018,37067082,Surgical Intensive Care Unit (SICU),Surgical Intensive Care Unit
10001217,27703517,34592300,Surgical Intensive Care Unit (SICU),Surgical Intensive Care Unit
10001725,25563031,31205490,Medical/Surgical Intensive Care Unit (MICU/SICU),Medical/Surgical
10001843,26133978,39698942,Medical/Surgical Intensive Care Unit (MICU/SICU),Medical/Surgical
10001884,26184834,37510196,Medical Intensive Care Unit (MICU),Medical Intensive Care Unit (M
10002013,23581541,39060235,Cardiac Vascular Intensive Care Unit (CVICU),Cardiac Vascular Intensive Care Unit (CVICU),Cardiac Vascular Intensive Care Unit (CVICU),Cardiac Vascular Intensive Care Unit (CVICU)

The number of ICU stays identified by stay_id

```
zcat < ~/mimic/icu/icustays.csv.gz |
tail -n +2 |
awk -F, '{print $3}' |
sort |
uniq |
wc -1</pre>
```

94458

There are 94458 ICU stays identified by the stay_id

The number of patients identified by subject_id

```
zcat < ~/mimic/hosp/admissions.csv.gz |
tail -n +2 |
awk -F, '{print $1}' |
sort |
uniq |
wc -l</pre>
```

223452

There are 223452 patients identified by subject_id

8. To compress, or not to compress. That's the question. Let's focus on the big data file labevents.csv.gz. Compare compressed gz file size to the uncompressed file size. Compare the run times of zcat < ~/mimic/labevents.csv.gz | wc -l versus wc -l labevents.csv. Discuss the trade off between storage and speed for big data files. (Hint: gzip -dk < FILENAME.gz > ./FILENAME. Remember to delete the large labevents.csv file after the exercise.)

Checking file size for the compressed version

```
ls -lh ~/mimic/hosp/labevents.csv.gz
```

```
-rw-r--r-@ 1 lukehodges staff 2.4G Oct 3 09:08 /Users/lukehodges/mimic/hosp/labevents.ca
```

This file is 2.4G

Checking file size for the uncompressed version

```
ls -lh ~/mimic/hosp/labevents.csv
```

```
-rw-r--r-@ 1 lukehodges staff 17G Jan 20 22:00 /Users/lukehodges/mimic/hosp/labevents.c
```

This file is 17G

Comparing the run times of the compressed and uncompressed

For Compressed

```
time zcat < ~/mimic/hosp/labevents.csv.gz | wc -1</pre>
```

158374765

```
real 0m51.899s
user 1m15.164s
sys 0m4.549s
```

For Uncompressed

```
time wc -l ~/mimic/hosp/labevents.csv
```

158374765 /Users/lukehodges/mimic/hosp/labevents.csv

```
real 0m54.922s
user 0m50.067s
sys 0m4.544s
```

This shows that compressed is slower than uncompressed.

This is because compressed has to go through the decompressing of the file

In other words, compressed saves storage, but slows time

Uncompressed takes up storage, but is faster.

Q4. Who's popular in Price and Prejudice

1. You and your friend just have finished reading Pride and Prejudice by Jane Austen. Among the four main characters in the book, Elizabeth, Jane, Lydia, and Darcy, your friend thinks that Darcy was the most mentioned. You, however, are certain it was Elizabeth. Obtain the full text of the novel from http://www.gutenberg.org/cache/epub/42671/pg42671.txt and save to your local folder.

```
wget -nc http://www.gutenberg.org/cache/epub/42671/pg42671.txt
for char in Elizabeth Jane Lydia Darcy
do
    echo $char:
    grep -n "$char" pg42671.txt | wc -l
done
```

```
File 'pg42671.txt' already there; not retrieving.
```

Elizabeth:

633

Jane:

289

Lydia:

4.0

166 Darcy:

414

Explain what wget -nc does. Do not put this text file pg42671.txt in Git. Complete the following loop to tabulate the number of times each of the four characters is mentioned using Linux commands.

Wget -nc downloads the file, but doers not replicate if it already is downloaded.

2. What's the difference between the following two commands?

```
echo 'hello, world' > test1.txt
```

and

```
echo 'hello, world' >> test2.txt
```

The first command directs the output to the test1.txt, saying 'hello, world'.

The second command appends (adds it) to a file named test2.txt.

Using your favorite text editor (e.g., vi), type the following and save the file as middle.sh:

 $\#!/bin/sh \# Select lines from the middle of a file. <math>\# Usage: bash middle.sh filename end_line num_lines head -n "$2" "$1" | tail -n "$3"$

Using chmod to make the file executable by the owner, and run

The middle.sh is set to my desktop. The command chmod 751 gives executive function and access to the user.

chmod 751 /Users/lukehodges/desktop/203b-hw/middle.sh

/Users/lukehodges/desktop/203b-hw/middle.sh pg42671.txt 20 5

Release date: May 9, 2013 [eBook #42671]

Language: English

Explain the output. Explain the meaning of "\$1", "\$2", and "\$3" in this shell script. Why do we need the first line of the shell script?

The output is the 20th line of the file pg42671.txt and the following 5 lines. The "\$1" is the first argument, which is the file name. The "\$2" is the second argument, which is the line. The "\$3" is the third argument, which is the number of lines. The first line of the shell script is needed to tell the computer what shell to use to run the script.

Q5. More fun with Linux

Try following commands in Bash and interpret the results: cal, cal 2025, cal 9 1752 (anything unusual?), date, hostname, arch, uname -a, uptime, who am i, who, w, id, last | head, echo {con,pre}{sent,fer}{s,ed}, time sleep 5, history | tail.

cal

This makes a calendar of the current month of the current year
